Task Assignments:

Task Description	Assigned to
Query integration for cashier	Harry
Query integration for customer	Julio
Query and back-end completion for the manager	Yuriy
Integrate login and googleAUTH	Aditya

Minutes from Previous Meeting

We discussed what finalized requirements were needed because the front end was complete, and so was most of the back end besides the ordering connection from the database to GUI. We plan on working a little more on distributing the work so no one overlaps and is required to wait for others to complete their tasks. We are trying new methods to integrate the GoogleAUTH feature and login so that it can work. We are also thinking of how to add our above and beyond requirement, which will most likely be an allergy feature. We're undecided on whether to add symbols for items with allergies or outright gray out items that have allergies.
