Cashier back end implementation	Harry	yes

Before The Next Meeting

Plans:

- Complete the entire back end for customer

- Complete the entire back end for cashier

- Complete the entire back end for manager

- Integrate the APIs

Task Assignments:

Task Description	Assigned to
Integrate the APIs	Aditya
Complete back end for cashier	Harry
Complete back end for customer	Julio
Complete back end for manager	Yuriy

Minutes from Previous Meeting

Since we are mostly done adding all the necessary visible features on the front end, we need to focus on the back end. All the symbols and text sizing are complete, and you can tab to all the options. Harry and Julio will focus on the cashier and customer backends and get the order process working (specifically queries) because those have priority. Yuriy will implement the manager logistics and get the tables and project 2 manager features working in the webapp. Aditya will focus on finishing the GoogleAUTH first and then finish the weather API.
