Task Description	Assigned to
Complete Back end for Customer View	Julio
Complete Back end for Manager View	Yuriy
Complete Front end for Manager View	Harry
Add new Accessibility Features	Julio
Complete Back end for Cashier View	Aditya

Minutes from Previous Meeting

We had to discuss how to run the program now that the front end and back end are deployed, making the entire web application in the cloud. Now we had to discuss how to consistently push out commits when the website was almost complete since only a few functionalities needed to be added for the back end to connect to the front end for both cashier and customer view. The manager view was the only view in the prototype, meaning the project was almost complete at Sprint 2. We are adding new functionality based on review from the interviews to make the website better and more user friendly for accessibility.
